

Determination of threshold values

In the light of British threshold values, a proposal from the Danish Electricity Saving Trust/Danish Technological Institute dated 5 August 2004 and indications from three suppliers, the following is decided:

Refrigerators:

A threshold value of **15 kWh/48h/m³** is decided for 400/600 litres cabinets (one-door) and for a threshold value of **12 kWh/48h/m³** is decided for 1300 litres cabinets (two-doors).

Freezers:

A threshold value of **40 kWh/48h/m³** is decided for 400/600-litres cabinets (one door) and a threshold value of **36 kWh/48h/m³** is decided for 1300-litres cabinets (two-doors).

Threshold values [kWh/48h/m ³]	Refrigerators (M1)	Freezers (L1)
400 og 600 litres	15	40
1300 litres	12	36
